Practical N0 4-C

Aim:.Develop an Android application using FrameLayout to overlay UI elements.

FrameLayout is a ViewGroup that displays its child views stacked on top of each other.

- The first view is placed at the bottom.
- The next views are placed above it.
- Commonly used for:
    - Fragments
    - Image overlays
    - Labels on images
    - Custom UI designs

Code:

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
  xmlns:app="http://schemas.android.com/apk/res-auto"
  xmlns:tools="http://schemas.android.com/tools"
  android:id="@+id/main"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  tools:context=".MainActivity">

  <ImageView
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:src="@drawable/nature"
    android:scaleType="centerInside"/>

  <!-- Text Over Image -->

  <TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_gravity="center"
    android:text="Beatiful Nature"
    android:textColor="@color/design_default_color_primary"
    android:textSize="24sp"
    android:textStyle="bold" />
</FrameLayout>
```
